

Passages in Lists

In this walkthrough, recipes are arranged in a **List**, which allows each Passage to be accompanied by surrounding text.

Prerequisites:

- The "Recipes" Folio from [Tag Passages](#); **OR**
- Open [this Folio document](#) and [import](#) it

You will:

- Create a **List** of recipe names in the "Cookbook" form
- Customize the List with a **Fetcher** to fetch the content of each recipe

Some forms require not only that Passages be inserted, but that they be arranged in a particular way and perhaps embellished with additional material before and after. This can be accomplished by arranging the Passages in a **List**. You might use this method to create:

- A catalog of parts where each part appears in a table row.
- A series of quotations where each quote is followed by a citation.

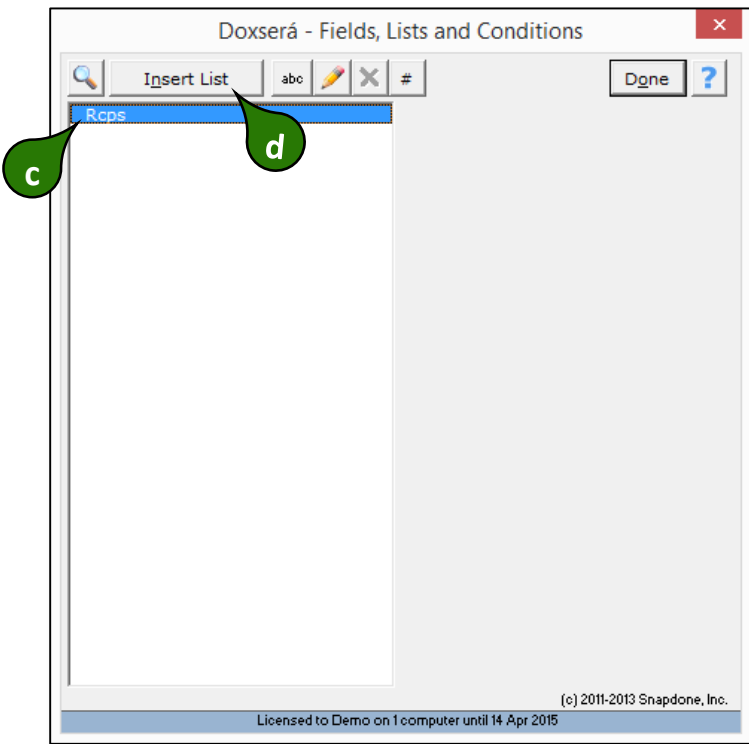

1 Quick Start Open this partially completed form: [Cookbook 4](#)

2 Add a List

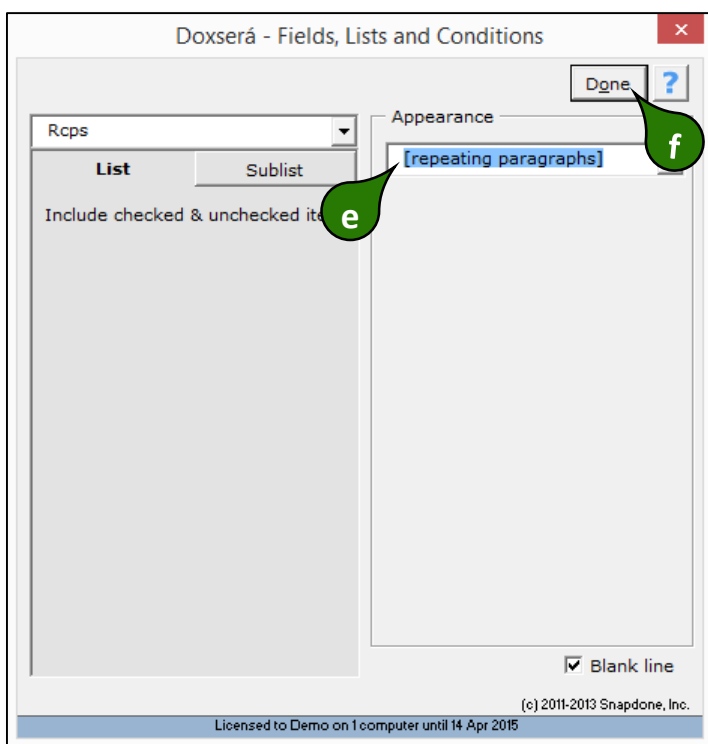

- Select the spot in the form where the List of recipes should appear
- Click **List**

- The **Rcps** answer is already selected
- Click **Insert List**

- Select **[repeating paragraphs]**
- Click **Done**

3 Customize the List

- Delete the words **Sample paragraph about**
- {Rcps#X}** marks where each Passage's name will appear. Make it bold, underlined, and a larger font size.
- Delete the period and add a hard return between the two paragraphs

Here are some recipes you're sure to enjoy.

a {List:Sample paragraph about {Rcps#X}.
 [[ditto]][ditto]

b **c**

Happy cooking!

🕒 After

The Adequate Cookbook for Adequate Cooks

Here are some recipes you're sure to enjoy.

c {List:{Rcps#X}
 [[ditto]][ditto]

b

Happy cooking!

4 **Add a Fetcher**

- a** Place the cursor in the empty middle paragraph
- b** Click **Fetcher**

The screenshot shows the Microsoft Word ribbon with the 'Fetch' button highlighted in the 'Form Author's Tools' group. The document content is the same as in the 'Before' state, but with a cursor placed in the empty middle paragraph (marked 'a') and the 'Fetch' button in the ribbon (marked 'b').

- c** Select **variable** to show the **Fetch these Passages** panel
- d** Select **{Rcps#X}** to fetch the current item in the **Rcps** answer *
- e** Click **Insert Fetcher**

The screenshot shows the 'Doxserá - Fetcher' dialog box. On the left, there is a list of 'Folios' including 'Ailments', 'Attorney Bios', 'Doctors', 'Hospitals', 'Jury Instructions - Civil', 'Jury Instructions - Criminal', 'Medical Authority', 'Pleading Captions', 'Recipes', and 'Treatments'. The 'Fetch these Passages' panel is open, showing 'Name is: {Rcps#X}' selected. The 'Insert Fetcher' button is visible at the bottom right. Annotations 'c' and 'e' point to the 'variable' radio button and the 'Insert Fetcher' button respectively. Annotation 'd' points to the '{Rcps#X}' text in the 'Name is:' field.

* When creating custom Lists, you will almost always use **#X**, which designates the *current* item in the list. In unusual situations, you might use **#F** to designate the *first* item, **#P** for the *previous* item, **#N** for the *next* item, or **#L** for the *last* item.

... and Presto

The form is complete
