

A form where the user selects Passages

In this walkthrough, you create a “Cookbook” form that asks the form user to individually select dishes from the “Recipes” Folio.

Prerequisites:

- The “Recipes” Folio from [Create a Folio](#); OR
- Open [this Folio document](#) and [import](#) it

You will:

- Create a **Smart Answer** that lists dishes in the “Recipes” Folio as choices
- Create a **Fetcher** that inserts the selected dishes into the “Cookbook” form

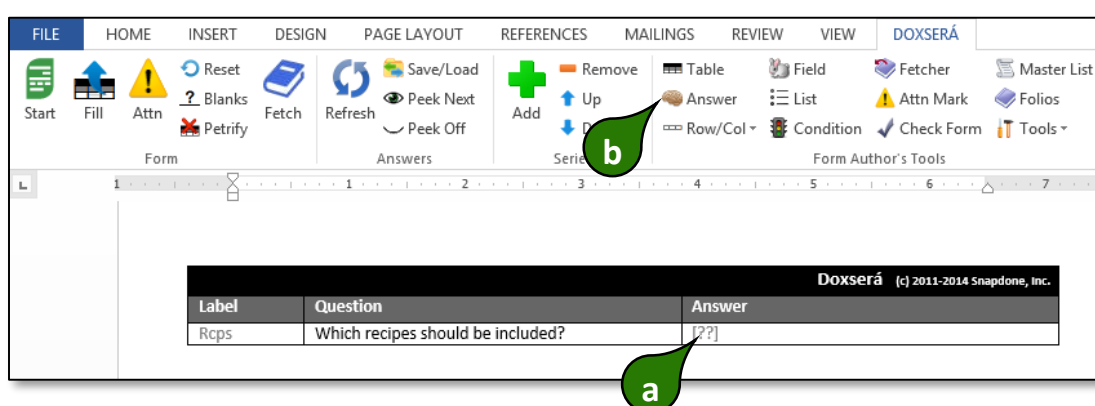

The form in this lesson asks form users to select one or more Passages from a particular Folio. This method could be used in:

- A form for jury instructions, where the user selects instructions from a full list of jury instructions.
- A lease agreement composed of clauses selected from a Folio of boilerplate paragraphs.
- An invoice form where parts are chosen from a Folio containing the entire inventory.

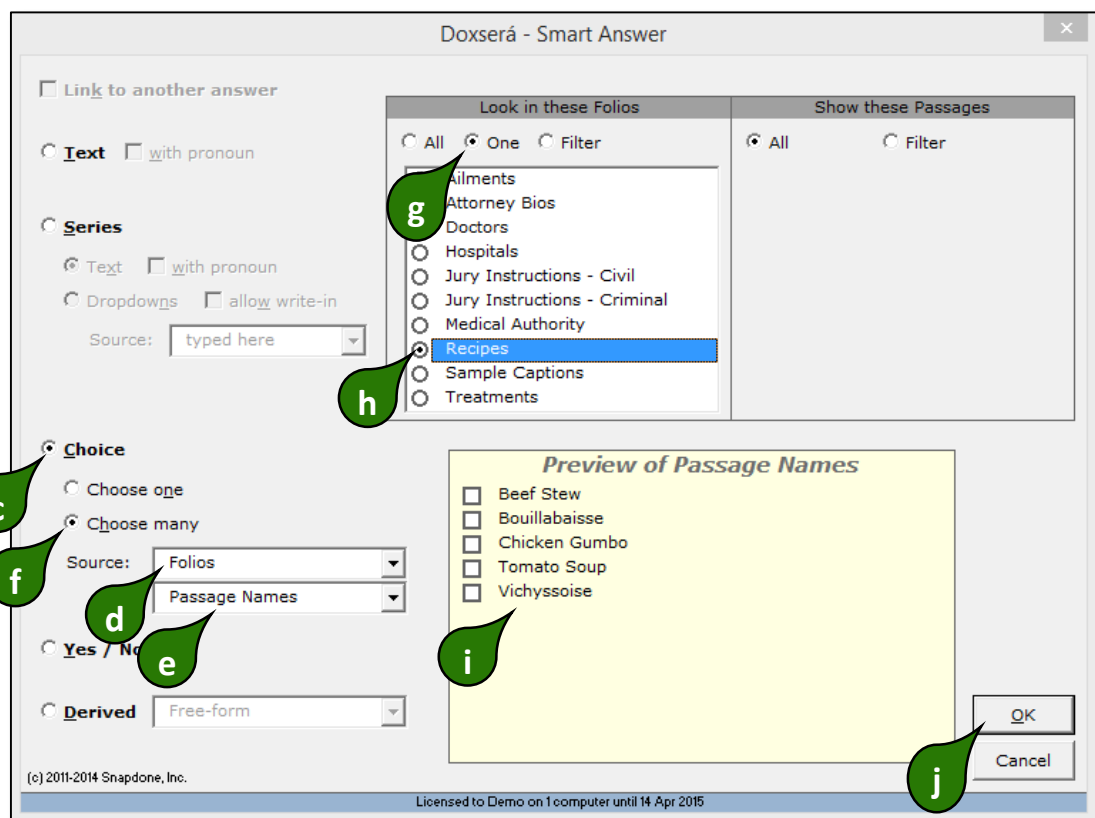

1 Quick Start Open this partially completed form: [Cookbook 1](#)

2 Create a Smart Answer that selects Passages

- a Place the cursor in the **Rcps** answer box
- b Click **Answer**

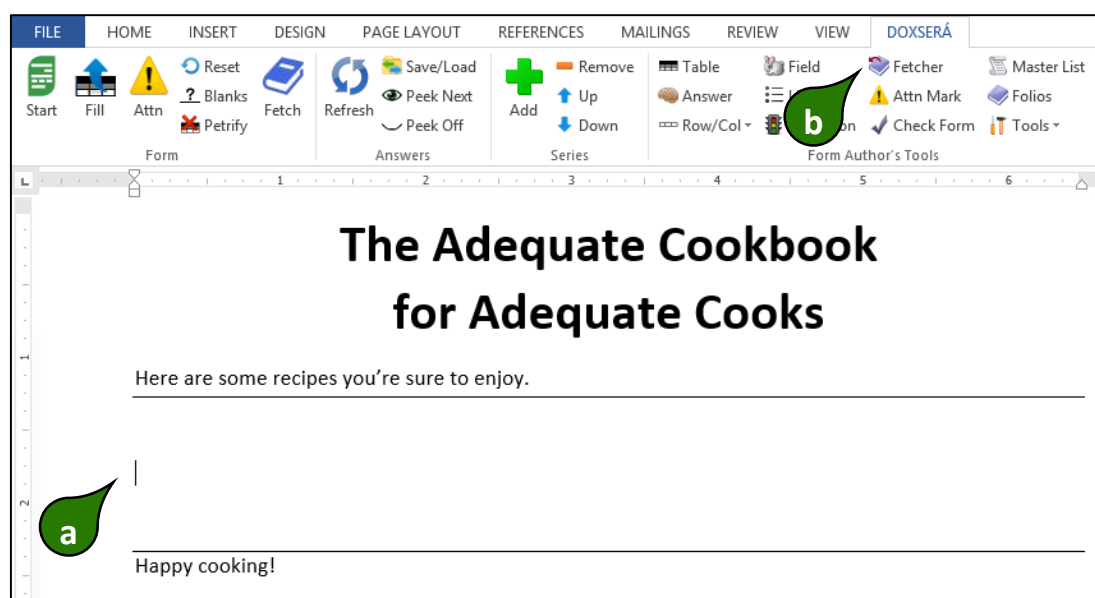

- c Select **Choice**
- d Select **Folios**
- e Select **Passage Names**
- f Select **Choose many**
- g Select **One Folio**
- h Select the **Recipes** Folio
- i The Preview shows choices that will be presented to the form user as possible answers
- j Click **OK**

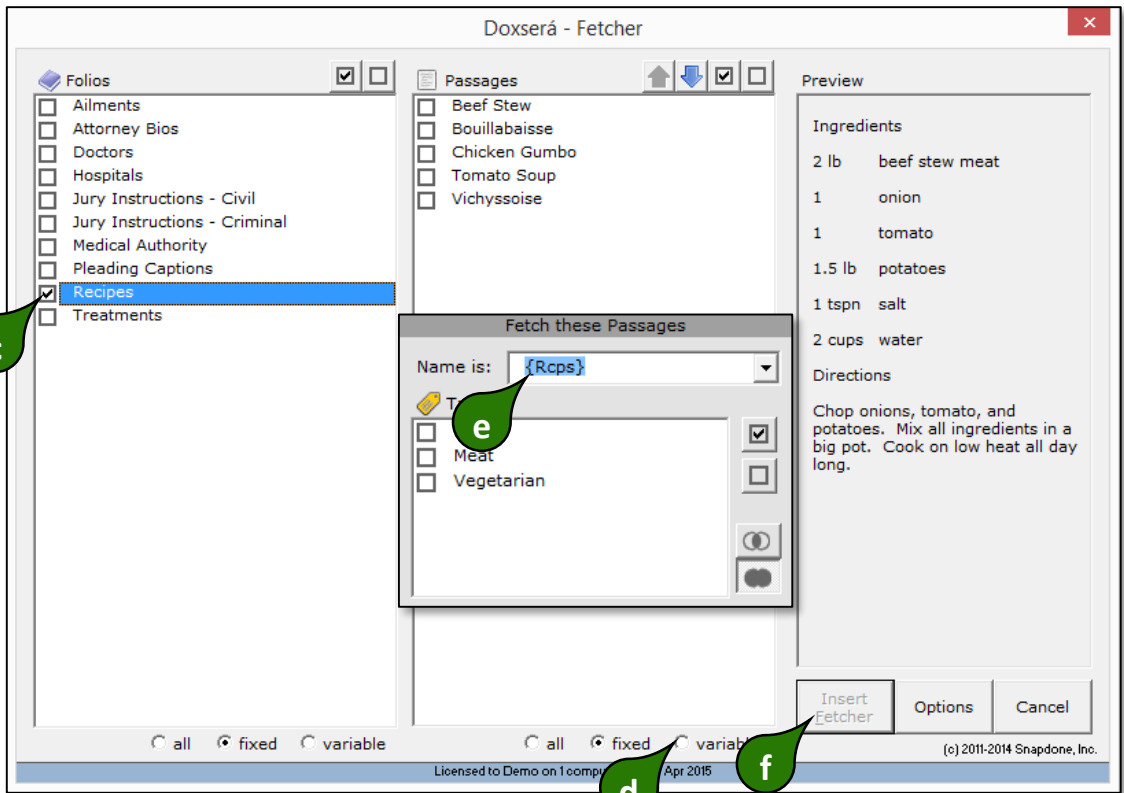

3 Add a Fetcher

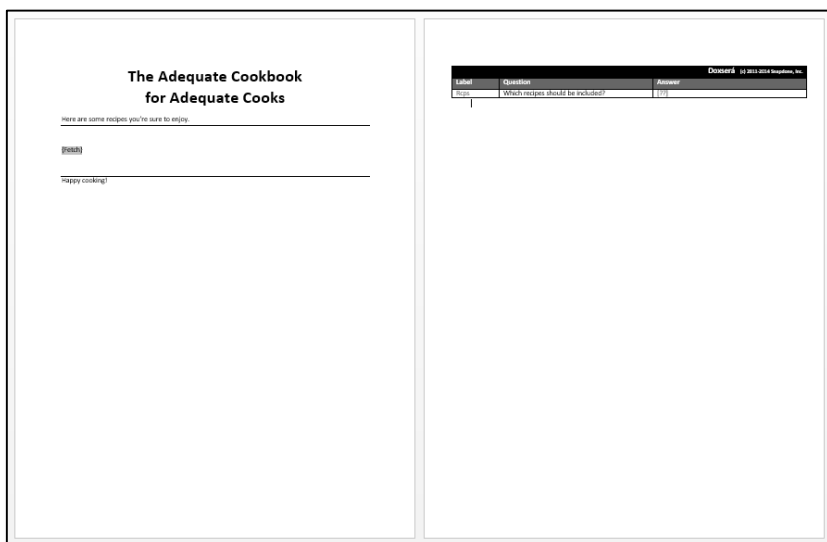

- a Select the spot in the form where recipes will be inserted
- b Click **Fetcher**

- c** Select the **Recipes** Folio
- d** Since we don't know in advance which Passages will be used, click **variable** to show the **Fetch these Passages** panel
- e** The Passages to be fetched are chosen in the **Rcps** answer, so select the Passage name **{Rcps}**
- f** Click **Insert Fetcher**

... and Presto The form is complete
